

KAILSHIANSX

Product Requirements Document (PRD) - Community, Events & Builder Platform

Discover | Join | Attend | Build | Lead | Grow

Product: KailshiansX Platform

Parent: Kailshians Web Services

Version: 1.0

Document Type: Final Product Requirements Document

1. Product Vision

KailshiansX will be the digital home of a developer-events and community ecosystem. It should connect students, developers, founders, mentors, speakers, colleges, communities and sponsors through events, workshops, tech talks, hackathons, meetup series, leadership programs and collaboration opportunities.

The platform must go beyond event listings. Its core loop is: **Discover -> Participate -> Join -> Contribute -> Lead -> Organise -> Mentor/Speak -> Grow with KailshiansX.**

2. Primary Product Goals

1. Make every KailshiansX event, workshop, tech talk and community program discoverable.
2. Enable registrations, payments and participant communication.
3. Build structured Campus Lead and State Lead programs.
4. Showcase Meetup Series and Hackathon Series as long-term properties.
5. Create clear collaboration funnels for colleges, communities, venues and sponsors.
6. Present the Core Team and Founder story professionally.
7. Turn one-time attendees into long-term community members.
8. Give admins one place to manage events, leads, applications, certificates, partners and revenue.

3. Main Navigation

Home | Events | Workshops | Tech Talks | Meetup Series | Hackathon Series | Community | Campus Leads | State Leads | Collaborations | Gallery | Join Team | Core Team | Founder | Who We Are

4. Home

The homepage must communicate the brand within seconds. Hero positioning: **Developer Events. Builder Communities. Real Connections.** Primary CTAs: Explore Events, Join Community, Partner With Us.

Sections: hero, upcoming events, impact counters, featured meetup/hackathon series, tech talks, workshops, community programs, gallery highlights, partners, testimonials and final conversion CTA.

5. Events

Events page with filters for Upcoming, Past, Meetup, Hackathon, Workshop, Tech Talk and City. Each event page should support cover, overview, date/time, venue, schedule, speakers, judges, mentors, tracks, partners, ticketing, eligibility, FAQs, gallery and registration.

6. Workshops

Dedicated workshop catalogue with Upcoming and Past workshops. Categories may include MERN, Backend, System Design, DevOps, Cloud, AI, Blockchain, Open Source and Career Development. Include **Host a Workshop** and **Request a Workshop at Your College** funnels.

7. Tech Talks

A dedicated Tech Talks section for focused expert sessions. Each talk should have topic, speaker, profile, date, host institution/community, format, registration link and post-event resources. Past talks should become a searchable knowledge archive with photos, slides/video links where available and key takeaways.

8. Meetup Series

Meetup Series is the long-term home for city/community meetup brands. Each series page should show identity, city/region, purpose, editions, speakers, partners, attendance/impact, gallery and next edition. Examples can include RaibarX, PadharoX and TricityX.

9. Hackathon Series

Hackathon Series should support recurring hackathon properties such as NirmanX and AarambhX. Individual editions should include tracks, problem statements, rules, team size, timeline, prizes, judges, mentors, sponsors, registration, submission, results and gallery.

10. Community Setup

Community hierarchy: **KailshiansX -> State Leads -> City Communities -> Campus Leads -> College Chapters -> Members.**

Community page CTAs: Join Community, Become Campus Lead, Become State Lead, Start a Chapter, Become a Mentor, Become a Speaker.

11. Campus Lead Program

Campus Leads represent KailshiansX within colleges. Application fields: name, email, phone, college, city, course/year, LinkedIn, experience, community involvement, why KailshiansX and availability.

Admin workflow: **Applied -> Screening -> Interview -> Selected -> Active -> Alumni/Inactive.** Dashboard should track college, city, referrals, events supported, activities and performance.

12. State Lead Program

State Leads coordinate expansion across cities and campuses in a state. Responsibilities can include identifying campus leads, supporting local events, partnerships, reporting and community growth. Applications require stronger experience and leadership evidence. Admin should track assigned state, cities, leads, initiatives and status.

13. Collaborations

Create a dedicated collaboration hub with four primary paths: **College Collaboration, Community Partner, Venue Partner, Sponsor/Brand Partner.**

Forms should collect organisation, contact person, email, phone, website/social profile, city, collaboration type, proposed event/initiative, resources offered/required and message. All leads enter a partnership pipeline in admin.

14. Join Team

Recruit for Technology, Events, Operations, Community, Partnerships, Sponsorship, Marketing, Design, Content, Social Media and Developer Relations. Application workflow: **New -> Reviewing -> Interview -> Selected -> Rejected.**

15. Core Team

A public Core Team page should establish credibility and make responsibilities visible. Each profile may include photo, name, role, short bio, area of ownership and professional/social links. Team categories can include leadership, technology, community, events, partnerships, marketing and operations.

16. Founder

A dedicated Founder section should explain the origin, vision and long-term direction of KailshiansX without turning the page into a personal resume. Include founder message, why KailshiansX was created, community philosophy, selected milestones and links to professional profiles.

17. Who We Are

Explain that **KailshiansX is the developer events and community initiative of Kailshians Web Services**. Present mission, vision, values and what the platform does: hackathons, meetups, workshops, tech talks, community chapters, founder/developer networking and industry sessions.

18. Gallery

Gallery must be organised by event and category rather than one photo dump. Categories: Meetups, Hackathons, Workshops, Tech Talks, Community, Behind the Scenes. Each event gallery should be shareable and usable as social proof for attendees and partners.

19. Registration & Payments

Flow: **Event -> Register -> Participant Details -> Ticket -> Payment -> Success -> Registration ID -> Confirmation Email -> QR Ticket**.

Support UPI, cards and net banking through an appropriate Indian payment gateway. Admin must see ticket type, payment status, revenue, attendance and refund status.

20. Member Profile / Developer Passport - Phase 2

Member accounts should consolidate My Events, Tickets, Certificates, Workshops, Hackathons, Applications and Community Role. A Developer Passport can show participation history and progression such as attendee -> campus lead -> organiser -> mentor/speaker.

21. Certificate System

Admin selects event, imports participant data, chooses template, generates certificates and sends them by email. Public certificate verification should use a unique ID. Participant flow: email/registration ID -> verify -> view -> download.

22. Admin Dashboard

Modules: Events, Registrations, Payments, Participants, Workshops, Tech Talks, Meetup Series, Hackathon Series, Community, Campus Leads, State Leads, Team Applications, Collaborations, Sponsors, Certificates, Gallery, Content and Analytics. Non-technical admins must be able to create and update events without code changes.

23. Revenue & Event P&L;

Each event should track ticket revenue, sponsorship revenue and other revenue against venue, travel, food, swag, marketing, printing, operations and other costs. Dashboard outputs: **Total Revenue, Total Expense, Net Profit/Loss and Profit Margin**.

24. Functional Requirements

- Responsive mobile-first experience.
- SEO-friendly event and series pages.
- Fast registration and payment journey.
- Role-based admin access.
- Form spam protection and validation.
- Email confirmations and status notifications.
- Search/filter for events and content.
- CMS-style management for pages and event data.
- Analytics for registrations, conversion, traffic and community applications.
- Secure storage of participant/application data.

25. Recommended Technical Stack

Frontend: Next.js + TypeScript + Tailwind CSS

Backend: Node.js / Next.js APIs

Database: PostgreSQL

ORM: Prisma

Authentication: Google + Email

Payments: Razorpay or equivalent India-focused gateway

Storage: Cloud object storage

Email: Transactional email provider

Hosting: Vercel / cloud infrastructure

Analytics: GA4 plus internal event analytics

26. MVP Scope - Phase 1

Launch with: Home, Who We Are, Events, Event Details, Registration/Payments, Workshops, Tech Talks, Meetup Series, Hackathon Series, Community, Campus Lead, State Lead, Collaborations, Gallery, Join Team, Core Team, Founder and basic Admin.

27. Phase 2

Member accounts, Developer Passport, certificate automation/verification, sponsor CRM, enhanced community dashboards, campus/state lead reporting, email automation and deeper event P&L; analytics.

28. Phase 3

Full hackathon management, submissions and judging, chapter dashboards, mentor/speaker network, partner portal, community analytics, recommendations and multi-city operational tooling.

29. Success Metrics

Track monthly active community members, event registrations, paid conversion, repeat attendees, workshop/tech-talk participation, Campus Lead applications/activation, State Lead coverage, collaboration leads, sponsor conversions, event profitability, certificate delivery rate and percentage of attendees who later take a community role.

30. Final Product Principle

KailshiansX should not be designed as a static events website. Every feature should move a person toward deeper participation: **attendee -> member -> contributor -> lead -> organiser -> mentor/speaker**. The product succeeds when events become the entry point to a durable developer community.
